

# SHRINKFAST® 998 GAS GUN

**When time is of the essence the power of the Shrinkfast® Model 998 will get the job done quickly and efficiently.**

- **Powerful**

Offering more power than leading competitors, the Shrinkfast® 998 will shrink the toughest jobs quickly and economically. It can shrink-wrap a 40" x 48" x 60" pallet in less than two minutes.

- **Lightweight**

With its ergonomic design and weighing only 1.0 kg., the Shrinkfast® 998 is perfectly balanced for operator comfort. It's fan shaped combustor gives an even and steady heat pattern for consistent shrink-wrapping.

- **Safe**

Built-in safety mechanisms include a "dead man" trigger designed to automatically shut off the flame once the trigger is released. In addition, the Shrinkfast® patented combustion cycle allows the flame to burn outside the nozzle, which remains cool to the touch, even after extensive use. The regulator has an automatic safety POL that shuts off the gas supply in the case the hose gets cut or develops a leak.

- **Flexible**

When shrink-wrapping large equipment or difficult to reach areas, the Shrinkfast® integrated extension system provides unlimited shrinking possibilities. With a 600, 1200, or 1800 mm extensions available, no job is too big for the Shrinkfast® 998.

- **Durable**

The Shrinkfast® 998 comes with a one year manufacturer's warranty on all parts and labor. ITT Jetpak also offers comprehensive service, repair and spare parts back-up.

- **Versatile**

Shrink-wrapping results in a five-sided protection from the elements. Shrink film also produces a stronger bond than either stretch-wrap or banding. This additional protection is critical during the transportation and storage of everything from those odd-shaped pallets to large industrial equipment.
